

**DIAMETER** 12" / 305mm**WATTS** 60**IMPEDANCE** 16Ω**SENSITIVITY** 98 db

NEO magnet speakers are becoming the "go-to" choice for many guitarists. And to be honest, not all Neo magnet speakers are created equally. After years of research and development, sampling different types of speaker cone paper, voice coil material, dust cap sizes and motors of varying strength, we are excited to bring our British voiced "NEO magnet equipped" speaker to the masses. The Mojotone BV-NEO is an ultra lightweight speaker packed with power and TONE. Traditionally, most British voiced speakers are constructed with a heavy ceramic magnet and can weigh anywhere between 8-12 lbs. Weighing in at a mere 4.9 lbs, and inspired by our world famous BV-25m guitar speaker, the Mojotone BV-NEO delivers all the British Tone that your ears crave while reducing a significant amount of weight! Carrying your favorite speaker cabinets to and from the gig will be much easier with the Mojotone BV-NEO.
