# ATTENTION

## *PLEASE READ*

Mojo Musical Supply thoroughly tests each assembly prior to final packaging to verify that no defective parts make their way to our customers. Each pickup, switch, potentiometer, jack, capacitor, resistor and solder connection is evaluated and tested prior to shipping. If, for any reason, the safety tape has been removed or broken, Mojo will not be held responsible for any damaged or non-working components that may be a result of mishandling or abuse.

Prior to removing or breaking the tape, it is critical the customer evaluate the assembly for any shipping damages that may have occurred. If pickups are part of the assembly, the customer should measure each pickup for DC resistance before breaking the safety tape - pickups can only be returned if they are found to be damaged \*before\* the safety tape is broken. Also, the customer should check to see if any connections or components are broken from shipping. After the tape has been removed or broken, no damage claim can be filed and the customer will then be responsible for all shipping costs and materials required to fix or replace the assembly.

Mojo recommends highly that all assemblies should be installed by a professional technician who has experience in guitar electronics.
